Professional Experience

03/2023 - present

Blantyre, Malawi

Freelance Frontend Developer

Self Employed

- HTML5, CSS3 (plus SCSS and BEM), JavaScript, and React best practices were used to create three professional websites.
- I increased website performance by compressing images and components, caching, and using lazy loading.
- SEO, responsiveness, multi-platform support, and hosting support were all included, allowing them to access their website from any browser or device on the planet.

01/2023 - 03/2023

Frontend Developer Internship

Frontend Simplified [🔗](#)

- I turned a completely static HTML, CSS, JavaScript, and React single-page application into an interactive user interface by using animations, transitions, and carousels.
- Axios was used to process API requests to dynamically represent data from a cloud server, which was represented using skeleton loading states, pagination, and dynamic routing.
- I used Git version control and the GitHub interface to work and thrive in a virtual and collaborative team environment.

Projects

OpenAI Article Summarizer [↗](#)

- An open-source article summarizer that turns lengthy articles into concise summaries. This web application features a modern user interface, is related to the OpenAI model, and has Redux Toolkit integration, copy-to-clipboard capability, and browser history storage.

Library E-Commerce Store [↗](#)

- I created a fully responsive e-commerce app using React, HTML5, CSS, and JavaScript. Browse for books, use the filter system, and add your favorites to your shopping cart.

Netflix - Clone [↗](#)

- I designed and built a fully responsive full-stack Netflix clone using React, TypeScript, Tailwind CSS, Prisma, and MongoDB. Sign in with Google or GitHub, then search for movies and add your favorites to your watchlist.

Note - Taking App [↗](#)

- I used Typescript and Bootstrap to create a React note-taking app. This web app lets you make, edit, and delete notes, as well as tag them. It is also compatible with any device.

Currency Connect [↗](#)

- Maintain your lead with accurate conversions by using this Currency Connect web-based application that I built with Vite, Material-Ui, and React components. Axios was used to retrieve data from two different APIs.

Wordle - Clone [↗](#)

- I created a Wordle web-based game clone using HTML, CSS, and Javascript. It's mobile-friendly, lets you check your scores, and has some cool Javascript animations.
